Introduction to Scientific Computing

Typically, scientific computing in MATLAB is in double precision using 8-byte real numbers. Single precision may be used infrequently in large problems to conserve memory. Integers may also be used infrequently in special situations. Since double precision is the default and what will be used in this class we will focus here on its representation.

Introduction to Computing

The small number to the right of the 10 in scientific notation is called the exponent. Note that a negative exponent indicates that the number is a fraction (less than one). The line below shows the equivalent values of decimal notation (the way we write numbers usually, like "1,000 dollars") and scientific notation (103 dollars).
