Lidar (also called LIDAR, LiDAR, and LADAR) is a surveying method that measures distance to a target by illuminating the target with pulsed laser light and measuring the reflected pulses with a sensor. Differences in laser return times and wavelengths can then be used to make digital 3-D representations of the target. The name lidar, now used as an acronym of light detection and ranging ...

LiDAR for Automotive Market by Technology, Application

3D scanning is the process of analyzing a real-world object or environment to collect data on its shape and possibly its appearance (e.g. colour). The collected data can then be used to construct digital 3D models.. A 3D scanner can be based on many different technologies, each with its own limitations, advantages and costs. Many limitations in the kind of objects that can be digitised are ...

Vegetation Management Takes to the Air

Un lidar est un système opto-électronique composé d'un émetteur laser, d'un récepteur comprenant un collecteur de lumière (télescope ou autre optique) et un photodétecteur qui transforme la lumière en signal électrique, ainsi que d'une chaîne électronique de traitement du signal qui extrait l'information recherchée.

LYON, France â€“ August 29, 2017: Despite its age and maturity, the automotive market has witnessed many unexpected developments over the past two years. And as has always been the case, safety drives the market. Automotive OEMs and suppliers are now investing in technologies to develop autonomous and electric vehicles.
