approximation, illustrating what new physics may arise. Separate to this main discussion, the first two lectures stand alone in discussing where the simple models of coupled light and matter used in the rest of the course come from, in terms of the quantised theory of electromagnetism.

Light-Matter Interactions and Quantum Optics.

Light has been described both as a particle and as a wave. Isaac Newton (~1665) made up a particle model of light to explain many of the known behaviours of light at that time.

Semiclassical Theory of Light Matter Interactions

Interaction between light and matter In reality, however, we cannot treat microscopic physics with Newton's Laws. But without going into details, we can make a few observations just by simple physical intuition. Despite of the need for QM, from the example in metals, we can still treat the interaction between light and matter

Lecture 7 - Light-matter interaction 1

interaction of light with matter One of the most important topics in time-dependent quantum mechanics for chemists is the description of spectroscopy, which refers to the study of matter through its interaction with light
