and proposes a solution to perform simultaneous localization and mapping (SLAM), complete coverage, and object detection without relying on GPS or magnetometer data. We demonstrate an integrated approach to the exploration problem, and we make specific contributions in terms of mapping, planning, and sample detection

PDF: Download Counter: 112: Amazon: Link: Read Online Download Now. Ebook Description. This monograph introduces a unifying framework for mapping, planning and exploration with mobile robots considering uncertainty, linking such problems with a common SLAM approach, adopting Pose SLAM as the basic state estimation machinery. Pose SLAM is the ...

Human and Robotic Mission to Small Bodies: Mapping

author's Ph.D. thesis work. It deals with the mapping, path planning, and autonomous exploration problems, adopting the so-called Pose SLAM as the basic state estimation machinery. A novel approach allowing a mobile robot to plan a path and to select the appropriate actions to autonomously construct the map is proposed,

Mapping, planning and exploration with Pose SLAM. Student/s. Rafael Valencia Carreira ... Thesis Project; Thesis; Description. This thesis reports research on mapping, path planning, and autonomous exploration. These are classical problems in robotics, typically studied independently, and here we link such problems by framing them within a ...

The second core contribution of this thesis is an autonomous exploration method that complements the aforementioned path planning strategy. The method selects the appropriate actions to drive the robot so as to maximize coverage and at the same time minimize localization and map uncertainties.

the GIS technology in oil and gas exploration and mention how the GIS technology can help to evaluate the potential for oil and gas in promising locations and taking the appropriate decisions. Basically the advantages of GIS for petroleum exploration are to: Provides better way of viewing and exploring geological data.

Mineral exploration and development are information-gathering activities. In this sense, mineral exploration and development represent a variety of activities that collect information necessary to identify mineral deposits and then evaluate whether they should be developed into mines.
